

Opening for

Head of Wood Engineering and Kilning Operations

Accsys Technologies, manufacturer of the world's leading modified wood brands Accoya® & Tricoya®, is currently seeking applicants for a new Head of Wood Engineering and Kilning Operations role.

The position's initial focus will be on managing and improving the operations of our internal kilning operations and well as outsourced services and kilning, finger jointing and lamination of Accoya®. The role will include analysis and project management of the insourcing of additional wood engineering manufacturing steps including wood optimization processes and actual product assembly.

The role will include working with the Product Development, Engineering, Supply Chain, and Quality teams.

While most work will initially be focused on our Arnhem site in the Netherlands and service providers in this area, it will include coordination with our other manufacturing sites as well. Thus, the candidate must have a proven record of working well with diverse international teams.

If the prospect of working for a purpose driven company, with high performance and sustainable brands appeals, please see more information at the Accsys Careers page: www.accsysplc.com/careers
